

chemTraX is a web-based, highly visual, chemistry-centric tracking application, working within the iterative **DMTA** cycle

- It replaces multiple tools to track & manage design ideas, hypotheses, the associated synthetic compounds for prosecution, and captures *any* desired metadata
- It provides user views critical to all roles involved in driving project delivery through effective team-working e.g.
  - What have I been assigned to make? What are the priorities? (*Synthetic Chemists*)
  - What are the ongoing project chemistries? (*Team Leads*)
  - Who is doing what across all projects? What are the expectations? (*Managers*)
  - What is / isn't shared with my external partners / CROs? (*Collaboration Manager*)
  - What we have learned from implementing my design ideas? (*Designers*)
  - What is new / recently changed across the chemistry projects portfolio? (*All*)
